Hello everyone,

We have made two attempts in the last couple of weeks to access the dam at Grassy Trail reservoir. On both occasions the road has been impassible just after the first locked gate due to snow accumulations. On our most recent attempt (yesterday) I ran into one of the City's employees. He said that they have been unable to access the reservoir even by snow cat, and also said that there is a 12 foot drift that is blocking a portion of the road. They have been able to access the dam by snow shoe, and I would also snow shoe into the dam, but without heavy equipment I wouldn't be able to access the survey monuments. The City's employee mentioned that the County was going to bring in some heavy equipment this week in order to clear the road and dam surface. I will check with the City later this week and we will monitor the accessible points as soon as the conditions allow.

Thanks,
Cody Ware, PLS
